JORDAN VALLEY COOPERATIVE WEED MANAGEMENT AREA Organized to Prevent and Manage Noxious Weeds

Perennial Pepperweed

Description: Grows up to 6 feet tall, more commonly 3 to 4 feet, with lance shaped basal leaves on long petioles. Leaves have an obvious white midvein and both leaves and stems are waxy. A bright green form emergence to flowering then turns a darker green with waxy cuticle hardening. Flowers are white with 4 spoon shaped pedals borne in clusters at the branch tips from early summer to fall. Fruits are roundish, slightly hairy, 1/16 inch and contain two tiny smooth oval light brown seeds. Reproduces by both copious seed production and creeping roots. Rhizomatous shoots are formed in the top 6 inches of soil and emerge usually by mid May.

Habitat: Waste areas, ditches, roadsides, cropland and seasonally wet areas. Can be a particular problem in older stands of alfalfa and meadow hay.
From: Selected Noxious Weeds of Eastern Oregon

Please attend
Your input is vital to the continued success of the Jordan Valley CWMA

Control:

Successful control depends on spraying at the right time with an aggressive reapplication program. Treatment of re-growth after removal of grass hay has been an affective timing alternative.

- **Telar, Escort surfactant required**
- **Cimarron X-tra. And Cimarron Max**
- **Chaparral**
- **Arsenal**
- **2,4-D before bud stage**
- **Glyphosate is also effective tool**

Always read and follow label directions

The JVCWMA office is located at 508 Swisher Ave. Please call before coming to town, I may be out in the field.
